[JSutils](#) has updated windows activity monitor and shutdown utility [AlOff](#) to version 5.0. This major update includes the following changes: [AlOff](#) now supports download monitoring. Option to shutdown silently added. Log Off now a shutdown option. No longer supports Windows 2000. The configuration screen has been colour coded and rearranged to help simplify configuration. The User Exit flag has been inverted to be more logical, existing settings are retained. The log file format has been improved.

[AlOff](#) monitors the mouse, keyboard and download activity plus CPU load and starts shutdown if there has been no activity for the specified time. It also supports fixed activation and shutdown initiation times plus a fixed delay before shutdown initiation. [AlOff](#) supports all the normal shutdown modes. What is monitored, how the computer shuts down plus many other parameters can be changed from the configuration screen. [AlOff](#) Requires a registration code which is free for personal non commercial use. It can also be used to control a remote computer via a slave program.

[AlOff](#) is part of the [JSutils](#) group of software and was originally designed as part of a practical home energy saving project to save energy and money by reducing water use. It is free for personal non commercial use, supports Windows XP, Windows Vista and Windows 7, comes complete with html help and is simple to install and use.

[JSutils](#) is the home of a small collection of software associated with energy saving and energy saving calculation. Products include a range of computer shutdown utilities and calculators for electricity, gas, oil and water user plus calculators for electricity and water cost comparison.
