

EnCalcLU Press Release December 2011

Water Use And Cost Calculator EnCalcLU Updated To Version 3.4

Useful Links: [JSutils Website](#) [Shutdown Utility Index](#)
[Technical Notes Index](#) [Calculator Index](#)

[JSutils](#) has updated water use and cost calculator [EnCalcLU](#) to version 3.4. This is a minor update and bug fix release. Changes include no longer requiring administrator permissions to save defaults. Dates longer than 11 characters reformatted to fit the screen. Get Last now correctly sets cursor position and clears results. Various improvements to error handling and tool tips. Get Last and Remove Last now update currency symbols.

[EnCalcLU](#) calculates the cost of water use, allowing both the real cost based on meter readings and forward prediction based on the readings and elapsed time to be calculated. The results can be saved to a log file for later analysis. The program can cope with both water and sewage volume charges, varying tax rates and discounts plus fixed charges enabling most charging models to be handled.

[EnCalcLU](#) is part of the [JSutils](#) group of software and was originally designed as part of a practical home energy saving project to save energy and money by reducing water use. It is free for personal non commercial use, supports Windows 2000, Windows XP, Windows Vista and Windows 7, comes complete with html help and is simple to install and use.

[JSutils](#) is the home of a small collection of software associated with energy saving and energy saving calculation. Products include a range of computer shutdown utilities and calculators for electricity, gas, oil and water user plus calculators for electricity and water cost comparison.
