[JSutils](#) has updated network monitor and shutdown utility [LANOff](#) to version 5.4. This update fixes a bug where some buttons may not be re-enabled after the about and configuration screens time out. The About screen timeout has been increased to 60 seconds. Also fixes a bug where the system tray right click menu may not close when it loses the focus.

[LANOff](#) is a network monitor and shutdown utility which monitors up to four remote computers from a client computer and optionally shuts down the client and specified remote computers when the network fails or the specified computer shuts down. It also supports fixed activation and shutdown initiation times plus a fixed delay before shutdown initiation. Various parameters can be set via the configuration screen. [LANOff](#) was designed to be used in conjunction with [Alloff](#) or [ProcOff](#) to enable a backup server to be shut down automatically once several computers on a local network had completed their backups. It can also be used on its own. [LANOff](#) supports all the normal shut down modes. The program operates by interrogating each remote computer via a small slave program once a second. Uses of [LANOff](#) include monitoring up to four computers connected to a server shutting down the server when it is no longer needed or shutting down up to four computers connected to a server when the server shuts down. It can be started at a fixed time, from a command line, on start up or manually.

[LANOff](#) is part of the [JSutils](#) group of software and was originally designed as part of a practical home energy saving project to save energy and money by reducing water use. It is free for personal non commercial use, supports Windows 2000, Windows XP, Windows Vista and Windows 7, comes complete with html help and is simple to install and use.

[JSutils](#) is the home of a small collection of software associated with energy saving and energy saving calculation. Products include a range of computer shutdown utilities and calculators for electricity, gas, oil and water user plus calculators for electricity and water cost comparison.
