[JSutils](#) has updated process monitor and shutdown utility [ProcOff](#) to version 1.6. ProcOff can now be used with the Alloff slave (version 4.7 and later). This update also fixes a bug where some buttons may not be re-enabled after the about and configuration screens time out. The About screen timeout has been increased to 60 seconds. Fixes a bug where the system tray right click menu may not close when it loses the focus.

[ProcOff](#) monitors up to three processes and initiates computer shutdown if there has been no process activity for the specified time. It also supports fixed activation and shutdown initiation times plus a fixed delay before shutdown initiation. There is a configurable shutdown delay to give the option to cancel shutdown plus the ability to stop users with insufficient privileges closing the program. [ProcOff](#) supports all the normal shutdown modes. It can also be used to control a remote computer via a slave program.

[ProcOff](#) is part of the [JSutils](#) group of software and was originally designed as part of a practical home energy saving project to save energy and money by reducing water use. It is free for personal non commercial use, supports Windows 2000, Windows XP, Windows Vista and Windows 7, comes complete with html help and is simple to install and use.

[JSutils](#) is the home of a small collection of software associated with energy saving and energy saving calculation. Products include a range of computer shutdown utilities and calculators for electricity, gas, oil and water user plus calculators for electricity and water cost comparison.
